

Making the railway system
work better for society.

Technical document

TAF TSI — ANNEX D.2: APPENDIX F — TAF TSI DATA AND MESSAGE MODEL

*In the Document History table, version are identified as x.n where
“x” is a correlative number assigned to an approved version when reaching a main milestones
“n” is a correlative number assigned to draft versions, starting by 1. “n”=0 means version approved
Information related to previous draft versions (i.e. 0.1, 0.2 etc.) shall be deleted from the table when a subsequent approved version is issued.*

Document History

<i>Version</i>	<i>Date</i>	<i>Comments</i>
1.0	25.01.2011	Initial version
1.1	15.05.2012	New TAF TSI baseline 5.2

2.0	08.08.2013	All the chapters were revised due to the TAF TSI Revision Process and the TAF TSI CCM WP cycle 2012 – 2013. New TAF TSI baseline 5.3.
2.0	17.10.2013	Validated by the ERA TAF CCB on 11.09.2013
2.1	10.02.2015	All the chapters were revised due to the TAF TSI CCM WP cycle 2013 – 2014. Validated by the ERA TAF CCB on 10.02.2015. New TAF TSI baseline 2.1
2.2	18.03.2018	New TAF TSI baseline 2.2
2.2.2	16.06.2018	Validated by the ERA TAF CCB on 31.05.2018.
2.3.0	30.11.2018	Validated by the ERA TAF CCB on 28.11.2018.
2.3.1	16.04.2020	Hotfix 2.3.1
2.4.0	27.05.2020	Validated by the ERA TAF CCB on 27.05.2020
2.4.1	03.09.2020	Hotfix 2.4.1
2.5.0	15.12.2020	Validated by the ERA TAF CCB on 25.11.2020
3.0.0	15.06.2021	Validated by the ERA TAF CCB on 26.05.2021
3.1.0	15.12.2021	Validated by the ERA TAF CCB on 24.11.2021
3.2.0	15.06.2022	Validated by the ERA TAF CCB on 01.06.2022
3.3.0	15.12.2022	Validated by the ERA TAF CCB on 30.11.2022

Contents

1.	Summary	4
2.	Schema taf_cat_complete.xsd	4
3.	Schema taf_cat_codelists.xsd	677

Application:

With effect from 08 March 2012.

All actors of the European Union falling under the provisions of the TAF TSI.

1. Summary

The following document is a complete list of data elements and messages defined in the TAF-TSI data catalogue. It is represented in XML format.

This catalogue shall be used as a basis for message development. During the course of the technical specifications and the implementation phase, this catalogue may be modified and/or amended.

All the elements listed in appendixes B, C and D are contained within this catalogue and described in detail.

The TAF TSI data catalogue is split into two documents:

- › The schema TAF_CAT_COMPLETE.XSD, containing the messages and the main data elements of the TAF TSI
- › The schema TAF_CAT_CODELIST.XSD, containing the code lists of the TAF TSI

In accordance with Commission Regulation (EU) 2015/302 of 25 February 2015 amending Regulation (EU) No 454/2011 on the technical specification for interoperability relating to the subsystem ‘telematics applications for passenger services’, the technical document TAP TSI Technical Document B.30 attached to TAP TSI refers to the TAF TSI data catalogue. Therefore, for TAF TSI and TAP TSI there will share a unique RU/IM communication catalogue.

element **ChangeofTrackMessage**

diagram	<p>The diagram illustrates the structure of the ChangeofTrackMessage element. It consists of the following components:</p> <ul style="list-style-type: none"> MessageHeader: Used for all messages. MessageStatus: Assigned by the Sender (1=Creation, 2=Modification, 3=deletion). TrainOperationalIdentification: Associated with OperationalTrainNumberIdentifier. OperationalTrainNumberIdentifier: Associated with ReferenceOTN. LocationPlannedTrack and LocationActualTrack are associated with each other. BookedLocationDateTime: Scheduled Date and Time of a train at a specified location as defined in the path contract. TrainLocationStatus: Identifies the status of a train related to the actual time at a reporting point. InterruptionReason: This element identifies the reason for an interruption of the train running. InterruptionDescription: The free text description of an interruption. TransferPoint: Transfer point or station of destination in the considered network where the Reference Train Numbers r... TransfereeIM: Next ... <p>A note below the ChangeofTrackMessage box states: "This message is issued to show that the train is arriving at another platform to the one that was scheduled."</p>

element **ConsignmentOrderMessage/COMS/COM/CashOnDelivery**

diagram	<p>The diagram illustrates the structure of the CashOnDelivery element. It consists of three main components: 'CashOnDelivery' (represented by a dashed box), 'Amount' (represented by a rectangle with a double-lined border), and 'CurrencyCode' (represented by a rectangle with a single-lined border). An association line connects 'CashOnDelivery' to 'Amount', and another association line connects 'CashOnDelivery' to 'CurrencyCode'. Below the diagram, a detailed description states: 'Details of the amount to be collected on delivery and the currency code.'</p>

element PlannedTrainData

diagram	<p>The diagram illustrates the structure of the PlannedTrainData element. It is derived from the TrainType element. The PlannedTrainData element contains the following components:</p> <ul style="list-style-type: none"> TrafficType: Describes the type of traffic (combined, rolling stock, etc.). It is shown here as a generalization for coded values (e.g., from MTC). PushPullTrain: Indicates if the train can change direction without stopping. This flag can be used only with ProceedCode ZE, ZK, DK. TypeofService: Information about the services available on a train. Used for publication towards the passenger. CommercialTrafficType: Describes the relevant technical data for a running train. PlannedTrainTechnicalData: Shows the relevant technical data for a running train. ExceptionalGaugingIdent: Indicates an exceptional gauging in the train or for the wagon. DangerousGoodsIndication: Identifies dangerous goods. CombinedTrafficLoadProfile: This element does not refer to combined traffic units that can be used for freight. Reasons: <ul style="list-style-type: none"> The first option refers to "B" (Gauge-electro-mechanical). The other option refers to "C" (Digital MTC). The MTC may indicate the relevant values for each of the 24 traffic profiles. Once there is a path message for a train with combined traffic load, the MTC should indicate the possible max. value for all 4 elements: Q1L, Q2L, C1, C2. Further information about Combined Traffic Load Profile can be seen in the UIC 996-4 Leaflet.

diagram	<pre> classDiagram class LoadTableProduct class ProductUNCode class ProductRIDName LoadTableProduct "1" -- "0..1" ProductUNCode : LoadTableProduct "1" -- "0..1" ProductRIDName : </pre> <p>The diagram shows a UML class named 'LoadTableProduct' with two associations. One association leads to a class named 'ProductUNCode...' with a multiplicity of '0..1'. The other association leads to a class named 'ProductRIDName...' with a multiplicity of '0..1'. Both associations are marked with a small circle containing a '1' at the 'LoadTableProduct' end and a dashed line with a small circle containing a '0..1' at the other end.</p>

	All codes of Transport restrictions for Freight Traffic (cf. UIC 920-13) and Passengers Traffic are in the same list which is contained in the code list RestrictionCodes.	
	In this element we use only those codes that have "T - Technical" characteristics and "F - Freight" as the type. The codes below are sorted out from the RestrictionCodes. Only these codes should be used in this element.	
		F = Freight
	P = Passenger	
	T = Technical	
	D = Damage	
	L = Load	
	Code F or P Description	
		T D L
	07 F	Shunt only when hand brake operable with ground staff
		x
	11 F	Wagon other than bogie wagon with wheelbase of more than 9 metres
		x
	12 F	Bogie wagon with distance between wheels of more than 14 metres and up to and including a distance of 17,50 metres
		x
	13 F	Bogie wagon with distance between wheels of more than 17,50 metres
		x
	15 F	Wagon not allowed over the hump
		x
	16 F	Do not fly shunt or gravity shunt (3 red triangles)
		x x
	18 F	Must not use active braking equipment
		x
	25 F	Gas carrying tank wagon with orange side stripe
		x
	41 F	Place this wagon at the front of the train

	42	x F	x x	Place this wagon at the rear of the train
	63	x F (+P) planned one	x x	Special consignment or (for Passengers trains) loading/cinematic gauge larger than the
	70	F	x x	Shunt with care (1 red triangle)
	71	F	x x x	Shunt with special care (2 red triangle)
	94	x F	x x	Gas carrying wagon without orange side stripe
				x

element **TrainCompositionJourneySection/Locoldent**

diagram	<p>Detailed description of the associations:</p> <ul style="list-style-type: none"> TractionType: Describes the type of locomotive. First digit: "0" = not specified; "1" = external electric power supply by traction battery and chargers, that can or cannot be used; "2" = on-board traction power supply for traction without external electrical or other power supply available; "3" = hybrid traction (both on-board or electric traction available). Second digit (reference to clause 2.3.2 of the IEC and IAS TSI 3.3.0/2014): "0" = not specified; "1" = locomotive or power unit; "2" = trainset or multiple unit or railcar; "3" = shunter; "4" = on track machine or infrastructure inspection vehicle. TypeOfUsedHybridPowerunit: Information about the type of power unit in case of using a hybrid locomotive. LocoTypeNum...: Composite identifier for the locomotive and locomotives. First four elements identify the series of the loco, rest can identify the exact individual. LocoNumb...: Identifies the number of the locomotives, usually the European Vehicle Number (an EVN). It is currently not restricted only to numeric values. TractionMode: Identifies the mode of deployment of a traction unit within a train. First digit = traction role. Second digit = position in group of traction units with the same role. DriverIndication: 0 = no driver present in Loco; 1 = driver(s) in Loco present in Loco. TractionPositionInTrain: Identifies position of intermediate traction unit(s) in the train indicating after which wagon (specified by order number) the unit is placed.

element WagonAtDeparture

diagram	<p>The diagram illustrates the structure of the WagonAtDeparture element. It consists of three components: a central rounded rectangle labeled "WagonAtDeparture", a rectangle labeled "Location" with a small icon, and a rectangle labeled "DepartureTimeAtLocation". A line connects "WagonAtDeparture" to "Location", and another line connects "WagonAtDeparture" to "DepartureTimeAtLocation". Below the diagram, a note states: "Departure point of a wagon with location and departure time". To the right of the components, two callout boxes provide detailed descriptions: "Location" is described as "Identifies a Location using a LocationIdent", and "DepartureTimeAtLocation" is described as "the scheduled departure date and time at a defined location".</p>

element **WagonOperationalData**

diagram	<p>The diagram illustrates the UML class WagonOperationalData. It has several attributes represented by dashed boxes:</p> <ul style="list-style-type: none"> BrakeType: Type of braking system. BrakeWeight: Shows the Braked mass of the wagon according to the type of the braking system, in Tonnes. WagonMaxSpe...: Maximum allowed speed of the wagon according to the load and entry in the Rolling Stock Databases. In kmh. ExceptionalGaugingProf...: Identification of special load. Coding found in 404-2 chapter 4.9.1 (4AN + 3N). ExceptionalGaugingide...: Indicates that an exceptional Gauging is in the train or for the wagon. DangerousGoodsData...: Dangerous Goods Data. InfoOnGoodsShapeTypeDan...: Info on Goods Shape Type Dan. RestrictionsDueToLoadOrDamage: Possible restrictions applicable in the originating country to shunting operations in stations and to main-line movements on account of the nature of the load. Coding in Restriction Codes (according to UIC Leaflet 920-13). TotalLoadWeight: The total weight of the transportation unit on the freight wagon. This is the booked or actual weight of goods including packing and carrier's equipment. <p>Associations from WagonOperationalData include:</p> <ul style="list-style-type: none"> A solid line to a box labeled "Actual wagon parameters, dependent on load or damage. This group and its elements are optional (contract defines what IM requires). But if there is dangerous goods in the train, then this group is mandatory." A dashed line to BrakeType. A dashed line to BrakeWeight. A dashed line to WagonMaxSpe.... A dashed line to ExceptionalGaugingProf.... A dashed line to ExceptionalGaugingide.... A dashed line to DangerousGoodsData.... A dashed line to InfoOnGoodsShapeTypeDan.... A dashed line to RestrictionsDueToLoadOrDamage. A dashed line to TotalLoadWeight.

<xs:documentation>This element does refer to combined load units that can be used for Freight Requests only.
There are two entry options:

- One option refers to “P” (Semi-trailer/road semi-trailer);
- The other option refers to “C” (Swap body);

The RUs may indicate the relevant values if they are familiar with the IMs line profiles. In case there is a path request for a train with combined traffic load, the IM should indicate the possible max. value for all 4 elements (P1, P2, C1, C2). Further information about Combined Traffic Load Profile can be seen in the UIC 596-6 Leaflet.

element **TractionType**

diagram	<p>The diagram illustrates the XML schema structure for the TractionType element. It shows a main element TractionType containing several nested annotations and enumerations. The annotations provide documentation for specific values (e.g., 'Banking locomotive not coupled - 6th traction unit in the group' for value 46). The enumerations define the allowed values for the traction type.</p>

type	restriction of xs:token		
facets			
	Kind	Value	Annotation
	enumeration	0	documentation Not Defined
			documentation not used
	enumeration	1	documentation Track
			documentation The track is a uniquely defined part of location
	enumeration	2	documentation Private Siding
			documentation Tracks are not for open access
	enumeration	3	documentation Border Point Code
			documentation Special code for the Border Points are allocated at the country border and the points between different IM networks. Location of these points sometimes are not geographically same with the station or yard. Therefore these points are "logical point"
	enumeration	4	documentation Sorting Code
			documentation Destination station of the wagon has a code in order to provide shunting technology.
	enumeration	5	documentation Vehicle Parking Points
			documentation All points (tracks)
	enumeration	6	documentation Public Loading Places
			documentation Is a type of physical location on the open access network where consignor or consignee can load or unload wagons
	enumeration	7	documentation Private Loading Places
			documentation Is a type of physical location outside the open access network where consignor or consignee can load or unload wagons
	enumeration	8	documentation IM Path Tariff Point
			documentation Price Segment change between two IM Networks.
	enumeration	9	documentation Depot / Maintenance workshop. Place for overhaul or maintenance of the rolling stock.
	enumeration	10	documentation Switch/turnout
			documentation The location where two tracks meet or diverge.
	enumeration	11	documentation Grade Crossing
			documentation The location where two tracks on the same level cross each other.
	enumeration	12	documentation Section of the track
			documentation

	enumeration 13	Section is inside of the location considered part of a track. documentation Twin track point documentation
	enumeration 14	The spot where is end or start of the twinned track section. documentation Retarder (rail brake) documentation Trackside equipment to control the speed of the wagons running from the shunting hump.
	enumeration 15	documentation Platform documentation The area next to the track which has been raised to make access to railway vehicles easier.
	enumeration 16	documentation Railing documentation
	enumeration 17	barrier Safety equipment used to prevent access to the track by people and animals. documentation Movable scotch block documentation
	enumeration 18	Safety equipment across the track avoiding any unnecessary moving beyond that point. documentation Derailing stop / Trap points / Catch points documentation
	enumeration 19	Safety equipment is on one rail avoiding any unnecessary moving beyond that point. documentation Loading equipment documentation
	enumeration 20	Special equipment to facilitate the loading and unloading on the Public Loading Places. documentation Weighbridge documentation
	enumeration 21	Special equipment is to facilitate the measure of the weight of the wagon. documentation Building documentation
	enumeration 22	Those buildings where IM placed his staff for direct communication with RU staff or the IM buildings serve RU activities as well. documentation Level crossing documentation
	enumeration 23	Place where rail and road crossing in level. on the same level (grade) documentation Bridge documentation
	enumeration 24	Special built structure is over the road documentation Tunnel documentation
	enumeration 25	Structure to allow a railway line to pass under the surface. documentation Underpass documentation
	enumeration 26	Undercrossing or underground passage under the railway track. (Not used by trains) documentation Block section documentation
	enumeration 27	Block section outside of the location with primary code. In other words: a section on the open track between stations defined by signalling system. documentation Signal

		documentation A signal is a mechanical or electrical device erected beside a railway line to pass information relating to the state of the line ahead to train drivers/engineers.
	enumeration 28	documentation Sign and board documentation
	enumeration 29	Equipment to inform the board staff for train traffic and shunting. documentation Phase break documentation
	enumeration 30	Border of the power supply systems (catenary). documentation Leap in kilometer documentation
	enumeration 32	The section has deviation in length i. e. the section more or less than called. documentation Balise documentation
	enumeration 33	A balise is an electronic beacon or transponder placed between the rails of a railway as part of an Automatic Train Protection (ATP) system. documentation Hot spot detector documentation
	enumeration 34	Trackside equipment which detects hot wheels or axle-box on passing trains. documentation Flat wheel detector documentation
	enumeration 35	Trackside equipment which detects flat spots on wheels on passing trains. documentation Dynamic wheel load documentation
	enumeration 36	detector Special equipment is in trackside for inspect of the overloaded wagons. documentation Freight yard documentation
	enumeration 37	A freight yard is commercial usage of a physical location which can be used as a sending or a destination station in freight orders of rail freight transports. The freight yard can have his own codification documentation Loading point documentation
	enumeration 38	A loading point is a commercial usage of a physical location. Each loading point is assigned to a yard. documentation IM Network link documentation
	enumeration 39	It allows to link two locations from different IM Networks documentation Reservation code
	enumeration 40	documentation Metastation documentation
	enumeration 41	To mark a meta location that forms the link between different stations that are considered as equal (for the traveller) documentation CompanySpecificIdentifier documentation
	enumeration 42	Company specific identifier of the primary location documentation
		DIUM stations - Places of acceptance/delivery Station open into international traffic of goods (tariff point included in DIUM) - consignment acceptance/delivery station (loading points are excluded and covered by

		TypeCode 37).			
	enumeration 43	documentation			
		Passengers cars public loading	Is a physical location on the open access network where passengers can put their car on a carrying train		
	enumeration 44	documentation	Passengers cars private loading	Is a type of physical location outside the open access network where passengers can put their car on a carrying train	
	enumeration 45	documentation	Sewage dump	Place for cleaning
